AB The title coatings are derived from the low refractive-index polymers bearing fluoro alicyclic rings, and applied to a substrate via an anchor layer which is derived from copolymers of (meth)acrylate esters of an (alkoxy)silane and specified crosslinkers. An antiglare top coat, obtained from a 2% soln. of a perfluoro(butenyl vinyl ether) polymer in perfluoro(2-butyltetrahydrofuran), was applied to a polycarbonate substrate via an anchor layer obtained from a mixt. of Et acrylate-MMA-glycidyl methacrylate- γ -methacryloxypropyltrimethoxysilane-vinyl acetate copolymer, N-triethoxysilylpropylphthalimide and mono-N-triethoxysilylpropylphthalamide. The coating had excellent interlayer adhesion.
